

## II. CLAIM AMENDMENTS

1.-32. (Cancelled)

33. (Currently Amended) The first mobile terminal of ~~claim 32~~claim 36, wherein the short-range wireless communication transceiver comprises a bluetooth transceiver.

34. (Currently Amended) The first mobile terminal of ~~claim 32~~claim 36, wherein the short-range wireless communication transceiver is operable to communicate within an operational low power radio range.

35. (Currently Amended) The first mobile terminal of ~~claim 32~~claim 36, wherein the means for detecting whether a second mobile terminal is available for trading the digital collectable card further comprises a means for detecting whether the second mobile terminal has a digital collectable card trading capability.

36. (Currently Amended) A first mobile terminal comprising:

circuitry for trading a digital collectable card associated with a user of the first mobile terminal;

means for detecting whether a second mobile terminal is available for trading the digital collectable card; and

a short-range wireless communication transceiver for directly communicating with the second mobile terminal for trading the digital collectable card.

The first mobile terminal of claim 32, wherein the means for detecting whether a second mobile terminal is available for trading the digital collectable card further comprises a means for detecting the availability of a particular digital collectable card.

37. (Currently Amended) The first mobile terminal of ~~claim 32~~claim 36, further comprising a means for determining whether the first and second mobile terminals are in the same cell of a mobile communication network.

38. (Currently Amended) The first mobile terminal of ~~claim 32~~claim 36, further comprising a means for transferring confirmation and registration messages to a server administering the digital collectable card via a mobile communications network.

39. (Currently Amended) The first mobile terminal of ~~claim 32~~claim 36, further comprising a means for determining whether the second mobile terminal is in the vicinity of the first mobile terminal.

40. (Previously Presented) The first mobile terminal of claim 39, wherein the means for determining whether the second mobile terminal is in the vicinity of the first mobile terminal comprises a short-range wireless communication between the first and second mobile terminals.

41. (Currently Amended) The first mobile terminal of ~~claim 32~~claim 36, further comprising a means for determining whether another digital collectable card is available.

42. (Currently Amended) The first mobile terminal of ~~claim 32~~claim 36, wherein the first and second mobile terminals are operable to exchange messages proposing a meeting to trade the digital collectable card.

43. (Cancelled)

44. (Currently Amended) The method of ~~claim 43~~claim 45, further comprising detecting whether the second mobile terminal has a digital collectable card trading capability.

45. (Currently Amended) A method comprising:

trading a digital collectable card associated with a user of a first mobile terminal, including:

detecting whether a first mobile terminal is in the vicinity of a second mobile terminal;

detecting whether a second mobile terminal is available for trading a digital collectable card, including The method of claim 43, further comprising detecting the availability of a particular digital collectable card; and

communicating within an operational range of short range wireless communications directly between the first and second terminals for trading the particular digital collectable card.

46. (Currently Amended) The method of ~~claim 43~~claim 45, wherein detecting whether the first mobile terminal is in the vicinity of the second mobile terminal comprises determining whether the first and second mobile terminals are in the same cell of a mobile communication network.

47. (Currently Amended) The method of ~~claim 43~~claim 45, wherein detecting whether the first mobile terminal is in the vicinity of the second mobile terminal comprises exchanging a short-range wireless communication between the first and second mobile terminals.

48. (Currently Amended) The method of ~~claim 43~~claim 45, further comprising transferring confirmation and registration messages to a server administering the digital collectable card via a mobile communications network.

49. (Currently Amended) The method of ~~claim 43~~claim 45, further comprising exchanging messages proposing a meeting to trade the digital collectable card.

50. (Currently Amended) A system for trading a plurality of digital collectable cards comprising:

a first mobile terminal having a user associated with a first card of the plurality of digital collectable cards, wherein the system is configured to detect the availability of the first card;

a second mobile terminal having a second user, the second mobile terminal being capable for associating the second user with the first card, the second mobile terminal operable to determine if the first mobile terminal is in the vicinity of the second mobile terminal;

wherein the system is configured to detect whether the second mobile terminal is available for trading the first card, and

wherein the first and second mobile terminals both comprise a short-range wireless communication transceiver for directly communicating between the first and second mobile terminals for trading the first card.

51. (Previously Presented) The system of claim 50, wherein the short-range wireless communication transceivers comprise bluetooth transceivers.

52. (Previously Presented) The system of claim 50, further comprising:

a mobile communication network; and

a means for determining whether the first and second mobile terminals are in the same cell of the mobile communication network.

53. (Currently Amended) The first mobile terminal of ~~claim 32~~claim 36 further comprising:

a transceiver for cellular mobile wireless communication over a cellular mobile communication network;

an input user interface to request the digital collectable card from the cellular mobile communication network;

a memory to store the digital collectable card received at the first mobile terminal; an output user interface to display the received digital collectable card; and a processor configured to transmit user identity information to a digital collectable card server over the cellular mobile communication network and a request to receive a particular digital collectable card from the digital collectable card server, wherein the digital collectable card is adapted to be associated with the user based on the user identity information transmitted over the cellular mobile communication network from the first mobile terminal.

54. (Previously Presented) The first mobile terminal of claim 53, wherein the user identity information includes a password.
